PROFESSIONAL SUMMARY

Backend-focused Full Stack Engineer with 1+ year building production systems across NestJS, .NET Core, Next.js, and PostgreSQL. Reduced API latency by 63% via Redis caching, improved geospatial query performance by 25% through PostGIS optimisation, and shipped ML-powered microservices achieving 88% transaction categorisation accuracy. Experienced in microservices, gRPC, event-driven architecture, and CI/CD pipelines across AWS and Azure. Seeking backend-focused full stack roles where performance and system design matter.

WORK EXPERIENCE

QBS Co.

Associate Software Engineer

Feb 2026 – Present

- Cut API response latency from 1.6s to under 600ms by introducing Redis caching for third-party responses, eliminating redundant external calls on high-traffic monitoring screens.
- Built SSR dashboards in Next.js/TypeScript surfacing real-time KPIs, employee activity, and live monitoring feeds across graph and tabular views.
- Secured backend service connections end-to-end with JWT-based authentication covering token issuance, refresh handling, session management, and protected route enforcement.

Trainee Software Engineer

Nov 2025 – Jan 2026

- Replaced a manual admin workflow by building an RBAC/IAM interface in Next.js managing 160+ permissions across workspace-level feature gates with bulk assignment support.
- Delivered two production backend services: an inventory management API and an SLA workflow orchestration service using gRPC and Docker for distributed inter-service communication.
- Implemented OAuth2 and 2FA across distributed microservices with token/refresh handling and RBAC; integrated WhatsApp Business API for automated live ticket delivery.

KoderLabs

Associate Software Engineer

Mar 2025 – Oct 2025

- Reduced per-request DB hits from 6–8 queries down to 2–3 by refactoring service-layer logic to consolidate redundant calls across multiple endpoints, preserving full API backward compatibility.
- Eliminated a document generation bottleneck by building an async PDF pipeline with Azure Queue Storage and SignalR cutting processing time from ~1.6s to 400–500ms per document.
- Improved geospatial query performance by 25% via PostGIS spatial extensions, optimised spatial indexing, and Google Maps API integration on a multi-tenant SaaS platform.
- Developed backend modules and event-driven integrations on a NestJS/.NET Core platform, leveraging Azure Functions for asynchronous processing.

PROJECTS

TrackWise: AI-Powered Personal Finance Manager

May 2025 – Present

- Architected a modular RESTful API backend in NestJS/PostgreSQL with 56+ endpoints covering income tracking, expense management, savings goals, and budget planning.
- Built and deployed 3 ML microservices in Flask: a transaction categorisation model (88% accuracy, SBERT + Logistic Regression), an expense forecasting model (62.5% accuracy, Facebook Prophet), and an anomaly detection service (AUC-ROC: 0.87) — all trained on historical financial data.
- Integrated ML inference pipelines with async event-driven email workflows for real-time overspending alerts, account verification, and password reset reducing notification latency end-to-end.

EDUCATION

NED University of Engineering & Technology

Oct 2022 – June 2026

Bachelor of Science in Computer Science and Information Technology (CGPA: 3.32 / 4.00 — Karachi, Pakistan)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#

Frameworks: NestJS, .NET Core, Flask, Next.js, React

Architecture: REST APIs, gRPC, Microservices, CQRS, Clean Architecture, Event-Driven Architecture

Databases & Caching: PostgreSQL, PostGIS, MySQL, Neo4j, Redis

Cloud & DevOps: AWS S3, Azure Functions, Azure Queue Storage, SignalR, Docker, CI/CD, Git

Security & Testing: JWT, OAuth2, RBAC, 2FA, Jest, Swagger, Postman

ACHIEVEMENTS

Competitive Programming: 240+ problems on LeetCode & HackerRank | KODERZ COMBAT Round 2 qualifier
