SUMMARY

Backend-focused Software Engineer with 1+ years of production experience building distributed systems, microservice architectures, and AI-integrated platforms. Delivered multi-tenant SaaS products on Azure and AWS using NestJS, .NET Core, PostgreSQL, gRPC, CQRS, and Docker, focusing on scalable system design and performance optimization.

EDUCATION

NED University of Engineering & Technology — CGPA: 3.32 / 4.00 (2022–2026)

- B.S. Computer Science & Information Technology, Karachi

WORK EXPERIENCE

QBS Co.

Associate Software Engineer (Feb 2026 – Present)

- Developed modular VersEye platform using Next.js, contributing to identity, monitoring, and video management systems (IAM, KPI dashboards, Model Management, Region/Camera/CCTV workflows), reducing enterprise onboarding time by 40%.
- Built frontend integration layer consuming 10+ backend services with JWT authentication and Redis caching for real-time NVR/DVR streams, improving system scalability and reducing database load.

Trainee Software Engineer (Nov 2025 – Jan 2026)

- Built distributed microservices using Docker, gRPC, and CQRS; delivered Workspace Management, Live Monitoring, and Employee Tracking modules with 25% improved inter-service performance.
- Independently developed Product and SLA services for Ajeeks; implemented OAuth2 authentication with 2FA and built a Neo4j-based recommendation engine with WhatsApp automation using multi-hop graph traversal.

KoderLabs

(Mar 2025 – Oct 2025)

Associate Software Engineer

- Designed scalable multi-tenant SaaS backend using NestJS and .NET Core with Clean Architecture and event-driven patterns using Azure Functions, SignalR, and AWS S3.
- Optimized geospatial queries using PostgreSQL (PostGIS) and Google Maps API, reducing response time by 35%; refactored services to minimize redundant DB calls and improve API efficiency.

PROJECTS

TrackWise – AI-Powered Personal Finance Manager

(May 2025 – Present)

- Built modular backend system using NestJS and PostgreSQL with REST APIs for finance tracking. Integrated Flask-based ML microservices (Sentence-BERT + anomaly detection). Achieved 90% categorization accuracy on mixed-language financial data and enabled real-time anomaly alerts.
- Achieved 90% categorization accuracy on mixed English/Roman-Urdu inputs by hand-labeling the only regional financial dataset from scratch, eliminating manual tagging and delivering real-time overspending alerts via email.

CourseFlow – Constraint-Based Course Scheduler

(Oct 2024 – Jan 2025)

- Built a Flask API using Greedy and Backtracking algorithms to generate conflict-free timetables across 50+ courses with real-time constraint validation.

SKILLS

- **Backend:** NestJS, .NET Core, Flask, RESTful APIs, gRPC, GraphQL, Microservices, CQRS, Clean Architecture, JWT/OAuth2
- **Frontend & Languages:** Next.js, TypeScript, JavaScript, Python, C#
- **Databases & Cloud:** PostgreSQL, PostGIS, MySQL, Neo4j, Redis; AWS S3, Azure (Functions, SignalR, PostgreSQL), Docker, CI/CD
- **AI & Tools:** NLP, ML Integration, Jest, Unit & Integration Testing, System Design, Agile/Scrum, Git, Postman, Swagger

ACHIEVEMENTS

Advanced to Round 2 of KODERZ COMBAT and competed in Game of Codes V; solved 240+ problems on LeetCode and HackerRank across data structures, dynamic programming, and graph algorithms.
