PROFESSIONAL SUMMARY

Backend-focused Full Stack Engineer with 1+ year of production experience across NestJS, .NET Core, Next.js, and PostgreSQL. Delivered measurable impact across two companies cutting API latency by 63%, reducing DB hits by 60%, and shipping ML-powered microservices with 88% categorisation accuracy. Promoted within 3 months at QBS Co. while concurrently building a full-stack AI finance platform as a Final Year Project.

WORK EXPERIENCE

QBS Co.

Associate Software Engineer

Feb 2026 – Present

- Cut API response latency from 1.6s to under 600ms by introducing Redis caching for third-party responses, eliminating redundant external calls on high-traffic monitoring screens.
- Built SSR dashboards in Next.js/TypeScript surfacing 10 real-time KPIs across employee activity and live monitoring feeds, deployed as part of a production SaaS platform.
- Designed and enforced authentication architecture across 5+ microservices covering JWT issuance, refresh rotation, and session invalidation with zero reported auth breaches in production.

Trainee Software Engineer

Nov 2025 – Jan 2026

- Replaced a manual admin workflow by building an RBAC/IAM interface in Next.js managing 160+ permissions across workspace-level feature gates with bulk assignment support.
- Delivered two production backend services: an inventory management API and an SLA workflow orchestration service using gRPC and Docker for distributed inter-service communication.
- Implemented OAuth2 and 2FA across distributed microservices with token/refresh handling and RBAC; integrated WhatsApp Business API for automated live ticket delivery.

KoderLabs

Associate Software Engineer

Mar 2025 – Oct 2025

- Reduced per-request DB hits from 6–8 queries down to 2–3 by refactoring service-layer logic to consolidate redundant calls across multiple endpoints, preserving full API backward compatibility.
- Eliminated a document generation bottleneck by building an async PDF pipeline with Azure Queue Storage and SignalR cutting processing time from ~1.6s to 400–500ms per document.
- Improved geospatial query performance by 25% via PostGIS spatial extensions, optimised spatial indexing, and Google Maps API integration on a multi-tenant SaaS platform.

PROJECTS

TrackWise: AI-Powered Personal Finance Manager

May 2025 – May 2026

Final Year Project — Full-stack finance platform with AI-driven categorisation, forecasting, and anomaly detection.

- Architected a modular NestJS/PostgreSQL backend with 56 endpoints across income & expense tracking, savings goals, budget planning, and category-wise financial summaries.
- Built and deployed a Flask ML microservice (3 endpoints) on Hugging Face Spaces hosting three models: transaction categorisation (SBERT + Logistic Regression, 88% accuracy) surfaced during entry, next-month expense forecasting (Facebook Prophet) from 3+ months of user history, and real-time anomaly detection (AUC-ROC: 0.87) flagging unusual expenses against category history.
- Integrated ML inference directly into API responses for real-time alert delivery, implemented response caching and rate limiting to mitigate Hugging Face cold start latency, and built async event-driven email workflows for account verification and password reset.

EDUCATION

NED University of Engineering & Technology

Oct 2022 – June 2026

Bachelor of Science in Computer Science and Information Technology (Karachi, Pakistan)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#

Frameworks: NestJS, .NET Core, Flask, FastAPI, Next.js, React

Architecture: REST APIs, gRPC, Microservices, CQRS, Clean Architecture, Event-Driven Architecture

Databases & Caching: PostgreSQL, PostGIS, MySQL, Redis

Cloud & DevOps: AWS S3, Azure Functions, Azure Queue Storage, SignalR, Docker, CI/CD, Git

Security & Testing: JWT, OAuth2, RBAC, 2FA, Jest, Swagger, Postman

Other: 240+ problems on [LeetCode](#) & [HackerRank](#)
